Screen Resolution

Windows 7 screen resolutions are configured to standards set by the department at the time of installation. The screen will no longer auto-adjust. Two icons have been installed that will allow you to switch between a large screen view and the standard screen view. You will need to click on the "Start Menu" on the bottom left, choose "All Programs" and select either "Screen Size Large" for the view with the largest fonts or "Screen Size Standard" for the default resolution. This will allow users to choose the most comfortable size for their viewing.
