webDEALER

2015

Abstract: Three web service methods are made available to move information into webDEALER, and to check the status of a title application.

1 Introduction

webDEALER is the Texas Department of Motor Vehicles' online application that allows Texas motor vehicle dealers to electronically apply for Texas Title and Registration. This specifications document describes the methods and objects that third-party vendors use to access the web services that move information into webDEALER and which check the status of title applications.

1.1 Architecture

The web service uses the SOAP protocol with HTTP for message negotiation and transmission. Any programming language can be used to make requests, and data privacy is ensured via encrypted HTTP. Errors indicating success or failure of a request are explained using standard HTTP response codes, refer to [Error Codes](#).

Figure 1: TxDMV Web Services Architecture

1.1.1 Web Service Transaction

After the service provider (TxDMV) creates the WSDL file and the vendor uses that description to build for the service requestor (the dealer or county) the remote procedure calls to the TxDMV web services, a typical web service transaction has the following steps:

1. The service requestor requests the title information from the service provider via the methods and objects the vendor has developed.
2. The service provider responds to the remote procedure calls from the service requestor and returns the information requested.

1.2 Scope

The current scope of webDEALER web services is for new and used cars and trucks.

1.3 Testing

The web services are available for testing to assist in your development. The URL for the test WSDL is the following:

<https://webdealertest.txdmv.gov/TitleApplicationServicesHelp/services/TitleManagementWs?wsdl>

2 Processes for Using webDEALER Web Services

Three different processes are involved for a Dealer to use the webDEALER title authorization application:

1. **Dealer:** Dealer must contact the county or counties where the dealer has dealerships that will use webDEALER and request a webDEALER account for each location. The Dealer will be issued the login IDs and passwords that will allow access to webDEALER. See Figure 2: Dealer and Vendor webDEALER Processes Dealer and Vendor webDEALER Processes.
2. **Vendor:** Vendors who wish to assist a dealership with an integrated solution must contact TxDMV web services support for the URL from which they can receive the WSDL file and the webDEALER Integration Services Specifications. They then build the web services for the dealership. See Figure 2: Dealer and Vendor webDEALER Processes: Dealer and Vendor webDEALER Processes.
3. **Dealer:** Dealer begins using webDEALER for submitting title applications to TxDMV.

3 Frequently Asked Questions

Q: We understand that some Dealerships use Stock Number vs. Deal Number

A: Yes

Q: Can a duplicate deal # or VIN be entered for the same Dealer?

A: No. Currently the system is not designed for duplicate deal numbers or VINs.

Q: How does a user view uploaded documents and receipts?

A: This is out of scope for Web Service access. A user can view/print receipts in webDEALER only after Submission/Approval of Title. Links will appear as soon as data is transferred to the county.

Q: What is the difference between a user account for each General Distinguishing Number (GDN) and a user account for DBA web service access?

A: The parent dealership (GDN) holds its own user account but it may associate to the Dealer ID given to each dealership location (DBA) for their web service requests.

Integration Services: Web Service Specifications

4 webDEALER Methods

Operations of webDEALER web services are performed by the following methods:

4.1 Request method: **checkTitleStatus**

This method returns the status of a title in webDEALER. An example of the response to this method is here: [Response Example: checkTitleStatus Method](#).

4.1.1 Input:

Name	Description / Notes	Type	Max Length	Field Required / Optional	Validation	Values
dealerInfo	The following dealer information is assigned by webDEALER: <ul style="list-style-type: none">• Dealer's ID• Password• User name	DealerInfo Object		Required		
searchCriteria	Any one of these is required by webDEALER to locate the vehicle title: <ul style="list-style-type: none">• Title ID• VIN• Deal number	SearchCriteria Object		Required		

Integration Services: Web Service Specifications

4.1.2 Response:

Name	Description / Notes	Type	Max Length	Field Required / Optional	Validation	Values
message	List of error messages	Array of Message Object				
Success	Specifies whether the title is found in the database	Boolean				
titleId	Title identification number	int				
Vin	Vehicle identification number	String	22			
titleStatusLastUpdate	Date the title status was last updated	Date				
titleStatusCode	Status of the title application process; the status is provided by webDEALER.	String	1			Refer to the Title Status table.
Fees	Fees owed by dealer for title approval	Array of FeesObject				

Integration Services: Web Service Specifications

4.2 Request method: retrieveTitle

This method returns an existing title application in the webDEALER application. An example of the response to this method is here:

[Response Example: retrieveTitle Method.](#)

4.2.1 Input:

Name	Description / Notes	Type	Max Length	Field Required / Optional	Validation	Values
dealerInfo	The following dealer information is assigned by webDEALER: <ul style="list-style-type: none">• Dealer's ID• Password• User name	DealerInfo Object		Required		
searchCriteria	Any one of these is required by webDEALER to locate the vehicle title: <ul style="list-style-type: none">• Title ID• VIN• Deal number	SearchCriteria Object		Required		

Integration Services: Web Service Specifications

4.2.2 Response:

Name	Description / Notes	Type	Max Length	Field Required / Optional	Validation	Values
message	List of error messages	Array of Message Object				
success	Specifies whether the title is found in the database	Boolean				
titleApplication	The title application that the dealer completed	TitleApplication Object				
Fees	Fees owed by dealer for title approval	Array of FeesObject				

Integration Services: Web Service Specifications

4.3 Request method: insertTitle

This method will add a deal into the webDEALER application. It is the initial load of title application data from a dealership to TxDMV webDEALER. An example of a successful and an unsuccessful response to this method is here: [Response Example: insertTitle Method](#).method is here: [Response Example: insertTitle Method](#).

Note: The minimum data required to insert a Title Application is as follows: DealerInfo, VIN, and transaction date.

4.3.1 Input:

Name	Description / Notes	Type	Max Length	Field Required / Optional	Validation	Values
dealerInfo	The following dealer information is assigned by webDEALER: <ul style="list-style-type: none"> • Dealer's ID • Password • User name 	DealerInfo Object		Required		
titleApplication	The title application that the dealer completed	TitleApplication Object		Required		

4.3.2 Response:

Name	Description / Notes	Type	Max Length	Field Required / Optional	Validation	Values
message	List of error messages	Array of Message Object				
success	Specifies whether the title successfully loaded into webDEALER	Boolean				
titleId	Title identification number	Int				
transactionDate	Date the title was sent to webDEALER	Date				

Integration Services: Web Service Specifications

5 webDEALER Object Details

WebDEALER is comprised of the following objects.

Note: String values must not contain special characters and can only include numbers and letters. The recommended format for dates is YYYY-MM-DD.

5.1 Message Object

The message object holds error responses. It is returned by the insertTitle, checkTitleStatus, and retrieveTitle methods.

Name	Description / Notes	Type	Max Length	Field Required / Optional	Validation	Values
objectAttributeName	Representation of an object that has an error. For example, the OwnershipDetails object may contain an error.	String		Optional		
messageNumber	Unique number assigned to every message. See the Error Code List .	int		Optional		
messageDescription	The message name. See the Error Code List .	String		Optional		

Integration Services: Web Service Specifications

5.2 Fees Object

This object represents the fees the Dealer owes to process the title and registration application. This information is returned to the requestor by the insertTitle, checkTitleStatus, and retrieveTitle methods.

Name	Description / Notes	Type	Max Length	Field Required / Optional	Validation	Values
FeeDescription	Describes the type of fee charged to process the title	String	28			
FeeAmount	The fee amount charged to process the title	Decimal	9.2			

5.3 DealerInfo Object

This object represents the information webDEALER uses to identify a Dealer and allow the Dealer webDEALER access.

Name	Description / Notes	Type	Max Length	Field Required / Optional	Validation	Values
dealerID	Dealer's ID assigned by webDEALER	int		Required		
password	Dealer's password assigned by webDEALER. May contain special characters.	String	32	Required		
userName	Dealer's user name assigned by webDEALER	String	32	Required		

Integration Services: Web Service Specifications

5.4 SearchCriteria Object

This object represents the criteria necessary to find the title. Only one of the following is required:

- dealNumber
- titleId
- Vin

If the Dealership sells the same vehicle multiple times, the details associated with the latest title request will be returned.

Name	Description / Notes	Type	Max Length	Field Required / Optional	Validation	Values
dealNumber*	The deal number	string		Required*		
titleId*	Title identification number. This is the webDealer unique identifier for each webDealer Title. It is not the same as the TxDMV RTS DocNo.	Int		Required*		
Vin*	Vehicle identification number	String	22	Required*		

*Only one of these fields is required.

Integration Services: Web Service Specifications

5.5 TitleApplication Object

This object represents the vehicle title. The object is returned by the [retrieveTitle](#) method and can be requested by the insertTitle object. Validation and Field Required rules apply to this object.

Name	Description / Notes	Type	Max Length	Field Required / Optional	Validation	Values
titleId*	Returned, generated by webDEALER	int		Optional		
titleStatusCd*	Status of the title application process; the status is provided by webDEALER.	String	1	Optional		Refer to the Title Status table.
titleStatusLastUpdate	Indicates the time and date that the title was last modified by any party. This information is provided by webDEALER.	Date		Optional		
contractDate	Date that the vehicle sales contract was completed	Date		Required		
dealNumber	The deal number	string		Optional		
emailRenewalRequest	Whether the title renewal was requested via email	boolean		Optional		
eTitleRequest	Whether the title renewal was requested via eTitle	boolean		Optional		
ownershipEvidence*	The valid types of evidence that can prove title to a vehicle	int		Optional		Refer to the Ownership Evidence table.
ownershipDetails	The details of the vehicle's ownership as specified by the OwnershipDetails object	OwnershipDetails Object		Required		
rebateAmount	The amount of rebate offered	Decimal	9,2	Optional		
salesPrice	The final sales price after a rebate was applied	Decimal	10,2	Required		

Integration Services: Web Service Specifications

Name	Description / Notes	Type	Max Length	Field Required / Optional	Validation	Values
createdBy	The user account that initiated the title application. It can be the vendor submitting the title via the web service or a dealer adding the title via webDEALER.	String	10	Optional		
createTimestamp	The date and time that the title was submitted to webDEALER	Date		Optional		
tradeInModelYear	The model year of the trade in vehicle	int		Optional		
tradeInMake	The manufacturer of the trade in vehicle	String	4	Optional		
tradeInVin	The vehicle identification number of the trade in vehicle	String	22	Optional		
tradeInAllowance	The amount of money offered by the dealer as a trade in allowance	Decimal	9,2	Optional		
additionalTradeIn**	Whether more than one vehicle was traded in to make the deal	boolean		Optional**		
trailer***	Specifies the trailer that is on the title	Trailer Object		Required***		
vehicle***	Specifies the vehicle that is on the title	Vehicle Object		Required***		
vehicleHistory	The history of the vehicle as specified by the VehicleHistory object	VehicleHistory Object		Required		
vehiclePhysicalLocation	The vehicle address as provided by the dealer	Address		Optional		

* This information is returned by the retrieveTitle method.

** This field is reserved for future use. Currently webDEALER can only process one trade in vehicle.

*** Only one of these fields is required.

Integration Services: Web Service Specifications

5.6 OwnershipDetails Object

This object can represent a vehicle's owner(s), lienholders if any, or survivors if the owner dies.

Name	Description / Notes	Type	Max Length	Field Required / Optional	Validation	Values
ownerId	The identification information of the owner	IDVerification Object		Required		
owner1	The first owner	Entity Object		Required		
owner2	The second owner	Entity Object		Optional		
owner3	The third owner	PersonName Object		Optional		
ownerAddress	The address of the owner	Address Object		Required		
governmentOwner	Whether the vehicle is owned by a government	boolean		Optional		
survivor1Name	The name of the first survivor	PersonName Object		Optional		
survivor2Name	The name of the second survivor	PersonName Object		Optional		
additionalSurvivor	Indicates that there are more than two survivors	boolean		Optional		
lease	Future use	boolean		Optional		
lien1	The first lien on the vehicle. If there is no lien on the vehicle this field can be empty.	Lien Object		Optional		
lien2	The second lien on the vehicle	Lien Object		Optional		
lien3	The third lien on the vehicle	Lien Object		Optional		
additionalLien	Indicates that there may be more than three liens on the vehicle	boolean		Optional		
renewalRecipient	The entity who will be receiving the registration; typically this is not the owner.	Entity Object		Optional		
renewalRecipientAddress	The address to which the registration will be sent	Address Object		Optional		

Integration Services: Web Service Specifications

Name	Description / Notes	Type	Max Length	Field Required / Optional	Validation	Values
recipientEmail	The email of the entity receiving the e-reminder for renewal registration	String	50	Optional		

5.7 IDVerification Object

This object holds the owner's identification information.

Name	Description / Notes	Type	Max Length	Field Required / Optional	Validation	Values
idJurisdiction	The entity that issues this type of ID, such as a state, the US State Department, etc.	String	2	Required		
idNumber	The identification number on the ID, such as a Texas Driver's License number, or a Passport number	String	17	Required		
idType	Code for the type of identification	int	1	Required		Refer to the Types of Ownership Evidence table.

Integration Services: Web Service Specifications

5.8 Entity Object

This object represents the type of owner, such as whether the owner is a person, a business, or a government agency, etc.

Note: Either personOwner or organizationalOwner must be populated.

Name	Description / Notes	Type	Max Length	Field Required / Optional	Validation	Values
personOwner *	The name of the individual who owns the vehicle	PersonName Object		Required*		
organizationOwner *	The name of the organization that owns the vehicle	String	30	Required*		
entityType	Refers to the type of entity that owns the vehicle	String	2	Required		Refer to the Types of Entity table.

*Only one of these fields must be populated.

Integration Services: Web Service Specifications

5.9 Address Object

This object represents an address. The address can be for the current owner, or for the physical location of the vehicle, etc.

Name	Description / Notes	Type	Max Length	Field Required / Optional	Validation	Values
City	The city of residence. This can be the city of the current owner, a previous owner, the vehicle, etc.	String	19	Required		
Country	If this country field is empty then it signifies the USA; in which case the state and zipCode fields <i>are</i> required. If this country field is filled in, (which implies the country is not the USA) the postal Code is required and the state, zipCode, and zipCodeP4 fields must be empty.	String	4	Optional		
countyNumber	The county number of the county of residence. This number is provided by the state.	int	3	Optional		
postalCode	This is the postal code used in countries outside the USA. This code is required if the country field is filled in.	String	9	Optional		
State*	The state of residence; it is required if the country field is blank.	String	2	Optional*		
street1	The first line of the street address	String	30	Required		
street2	The second line of the street address	String	30	Required		
zipCode*	The zip code of the address; it is required if the country field is blank.	String	5	Optional*		

Integration Services: Web Service Specifications

Name	Description / Notes	Type	Max Length	Field Required / Optional	Validation	Values
zipCodeP4	This is the extended Zip Code that identifies with four digits the delivery area within the larger Zip Code; such as a group of apartments or a business. Optional if the country field is blank.	String	4	Optional		

* Required if the country field is blank

5.10 PersonName Object

This object represents an individual's name.

Name	Description / Notes	Type	Max Length	Field Required / Optional	Validation	Values
firstName	The first name of the vehicle owner	String	*	Required		
lastName	The last name of the vehicle owner	String	*	Required		
middleName	The middle name of the vehicle owner	String	*	Optional		

*The total length of these fields together is 30 characters.

Integration Services: Web Service Specifications

5.11 Lien Object

This object represents the lien information.

Name	Description / Notes	Type	Max Length	Field Required / Optional	Validation	Values
lienDate	The date that the lien was	date		Required		
lienSequenceNumber	The number relates to Lien1, Lien2, or Lien3.	int		Optional		1, 2, or 3
lienholder	Refers to the lienholder of the vehicle	LienHolder Object		Required		

5.12 LienHolder Object

This object represents the lienholder, if any.

Name	Description / Notes	Type	Max Length	Field Required / Optional	Validation	Values
Address*	This is the address of lienholders provided by the name1 or name2 fields. It is used only when permanentLienholderId is empty.	Address Object		Required*		
name1*	This is the name of an individual lienholder. It is applicable only when permanentLienholderId is empty.	String	30	Required*		
name2	This is the name of a second individual lienholder. It is applicable only if the name1 field is used.	String	30	Optional		

Integration Services: Web Service Specifications

Name	Description / Notes	Type	Max Length	Field Required / Optional	Validation	Values
permanentLienholderId	This is the ID of a certified lienholder such as a bank, credit union, etc. If name1, name2, and the address fields are filled, this field should remain empty.	String		Optional		

*Required only if permanentLienholderId is empty

Integration Services: Web Service Specifications

5.13 Vehicle Object

This object represents a vehicle.

Name	Description / Notes	Type	Max Length	Field Required / Optional	Validation	Values
bodyType	This is the body type of the vehicle	String	2	Required		Refer to the Vehicle Body Type table.
bodyVin	This is a VIN for a vehicle body.	String	22	Optional		
carryingCapacity	This is the maximum weight in pounds that is allowed to be carried in the vehicle by the manufacturer. This field is required for trucks unless the truck has a fixed weight (refer to the VehicleIndicators object on page 25).	int		Optional		
emptyWeight	This is the empty weight of the vehicle	int		Required		
majorColorCode	This is the primary color of the vehicle	String	3	Required		Refer to the Major Color Code table.
make	This is the manufacturer of the vehicle	String	4	Required		Refer to the Vehicle Make table.
minorColorCode	This is the secondary color of the vehicle	String	3	Optional		Refer to the Major Color Code table.
model	This is the model of the vehicle; this is a free form text field.	String	3	Required		
modelYear	This is the model year of the vehicle	int	4	Required		

Integration Services: Web Service Specifications

Name	Description / Notes	Type	Max Length	Field Required / Optional	Validation	Values
odometerBrand	Refers to the validity of the odometer reading.	String	1	Optional		Refer to the Odometer Validity table.
odometerReading	Refers to the actual odometer reading or whether it is exempt.	String	6	Optional		Mileage number on the odometer or 'Exempt'
registrationClass	RTS RegClassCd – This is a TxDMV assigned registration code and is returned when the retrieveTitle method is submitted.	Int		Optional		
unitNo	This is a vehicle number assigned by a dealer, such as an inventory number.	String	6	Optional		
vehicleClass	RTS VehClassCd – This is a TxDMV assigned vehicle code and is returned when the retrieveTitle method is submitted.	String	8	Optional		Truck or trailer
vin	Vehicle identification number	String	22	Required		
vehicleIndicators	Refers to specific vehicle information.	VehicleIndicators Object		Optional		

Integration Services: Web Service Specifications

5.14 VehicleIndicators Object

This object represents specific vehicle information.

Name	Description / Notes	Type	Max Length	Field Required / Optional	Validation	Values
diesel	Whether the vehicle has a diesel engine	boolean		Optional		
floodDamage	Whether the vehicle has sustained flood damage	boolean		Optional		
manufactureBuyback	Whether the vehicle has been bought back by the manufacturer	boolean		Optional		
rebuiltSalvageLossUnknown	Whether the vehicle was salvaged and rebuilt	boolean		Optional		
reconditioned	Whether the vehicle has been reconditioned	boolean		Optional		
reconstructed	Whether the vehicle has been reconstructed	boolean		Optional		
fixedWeight	Specifies a fixed weight for trucks and certain trailers. When this field is used, the carryingCapacity field (in the Vehicle and Trailer objects) does not have to be used.	boolean		Optional		

Integration Services: Web Service Specifications

5.16 Trailer Object (extends Vehicle)

This object represents a vehicle trailer.

Name	Description / Notes	Type	Max Length	Field Required / Optional	Validation	Values
travelTrailer	This declares a trailer pulled by a vehicle. When selected, the length must be populated.	boolean		Optional		
length*	This is the length (feet) of a trailer.	int		Required*		
width	This is the width (inches) of a trailer.	Decimal	5,2	Optional		
bodyType	This is the body type of the trailer	String	2	Required		Refer to the Body Type table.
bodyVin	This is a VIN for a trailer body.	String	22	Optional		
carryingCapacity	This is the maximum weight in pounds that is allowed to be carried in the trailer by the manufacturer. This field is required for trailers unless it has a fixed weight (refer to the VehicleIndicators object on page 25).	int		Optional		
emptyWeight	This is the empty weight of the trailer	int		Required		
majorColorCode	This is the primary color of the trailer	String	3	Required		Refer to the Major Color Code table.
make	This is the manufacturer of the trailer	String	4	Required		Refer to the Vehicle Make table.
minorColorCode	This is the secondary color of the trailer	String	3	Optional		
model	This is the model of the trailer; this is a free form text field.	String	3	Required		

Integration Services: Web Service Specifications

Name	Description / Notes	Type	Max Length	Field Required / Optional	Validation	Values
modelYear	This is the model year of the trailer	int		Required		
odometerBrand	Field not applicable					
odometerReading	Field not applicable					
registrationClass	RTS RegClassCd – This is a TxDMV assigned registration code and is returned when the retrieveTitle method is submitted.	Int				
unitNo	This is a trailer number assigned by a dealer, such as an inventory number.	String	6	Optional		
vehicleClass	RTS VehClassCd – This is a TxDMV assigned vehicle code and is returned when the retrieveTitle method is submitted.	String	8			
vin	Vehicle Identification number	String	22	Required		
vehicleIndicators	Refers to specific trailer information.	VehicleIndicators Object		Optional		

* Must be filled in if the travelTrailer field is selected.

Integration Services: Web Service Specifications

5.17 VehicleHistory Object

This object contains historical information that exists for a vehicle.

Name	Description / Notes	Type	Max Length	Field Required / Optional	Validation	Values
previousOwnerCity	Field not applicable					
previousOwner	Field not applicable					
previousOwnerState	Field not applicable					
previousTitleIssueDate*	Date the out-of-state title was issued	Date		Optional*		
previousTitleJurisdiction*	Abbreviation of the state where the title was issued	String	2	Optional*		
previousTitleNumber*	Previous out-of-state title number	String	17	Optional*		

* Reserved for out of state vehicles

Integration Services: Web Service Specifications

6 Value Tables for Specified Fields

A number of fields have sets of values that are used with the fields.

6.1 majorColorCode Field

These are the major and minor color codes for vehicles.

Color Code	Color Description	Color Code	Color Description
BGE	BEIGE	ONG	ORANGE
BLK	BLACK	PLE	PURPLE
BLU	BLUE	PNK	PINK
BRO	BROWN	RED	RED
GLD	GOLD	SIL	SILVER
GRN	GREEN	TAN	TAN
GRY	GRAY	WHI	WHITE
MAR	MAROON	YEL	YELLOW

6.2 make Field

These are the codes for the vehicle manufacturers.

Code	Make of Vehicle	Code	Make of Vehicle	Code	Make of Vehicle	Code	Make of Vehicle
ACUR	ACURA	DESO	DE SOTO	JEP	JEEP	PTRB	PETERBILT
AEAG	AMERICAN EAGLE	DETO	DE TOMASO	JOUR	JOURNEY	PUCH	PUCH
AIRS	AIRSTREAM	DIAD	DIAMOND	KAIS	KAISER	RAIC	RAINBOW
ALFA	ALFA ROMEO	DIAR	DIAMOND REO	KAWK	KAWASAKI	RAM	RAM
ALLE	ALLEGRO	DIAT	DIAMOND T	KGHY	KINGS HIGHWAY	RAMB	RAMBLER

Integration Services: Web Service Specifications

Code	Make of Vehicle	Code	Make of Vehicle	Code	Make of Vehicle	Code	Make of Vehicle
ALLS	ALL STATE	DODG	DODGE	KIA	KIA	RELA	RELIANT
AMER	AMBASSADOR	DOLI	DOLPHIN	KOTR	KING OF TH ROAD	RENA	RENAULT

6.4 titleStatusCode Field

These are the status codes for the title application process.

Code	Status of Application
W	Imported, waiting to process
I	In progress
S	Submitted
A	Approved
P	Paid
R	Returned

6.5 ownershipEvidence Field

These are the codes that show the types of evidence for vehicle ownership.

Code	Evidence Type
1	Texas Title
12	Certified copy of Texas Title
3	Out-of-state Title
6	Manufacturer's Certificate of Origin

Integration Services: Web Service Specifications

6.7 idType Field

These are the codes for the type of identification presented by the owner of the vehicle.

Code	ID Type
1	Driver's License / ID Card
2	Passport
3	US Military
4	US Immigration / Department of Justice
5	Department of State
6	Department of Homeland Security
7	FEIN

6.8 entityType Field

These are the codes for the type of owner of the vehicle.

Code	Entity Type
BS	Business
GV	Government
IN	Individual
NP	Non-profit
TR	Trust
EN	Entity
FR	Firm

Integration Services: Web Service Specifications

6.9 odometerBrand Field

These are the codes for the validity of the vehicle mileage as seen on the odometer.

Code	Validity
A	Actual mileage
N	Not actual mileage
X	Mileage exceeds mechanical limits

6.10 Error Codes

Following are error codes that may be returned when a request is made:

Code	Description of Error
173	THE COUNTY NUMBER MUST BE IN RANGE 1 - 254.
203	TRAVEL TRAILERS MUST BE LESS THAN 40 FEET IN LENGTH.
733	THE DATE IS NOT VALID.
806	AN ELECTRONIC LIEN IS NOT AVAILABLE WITH MORE THAN ONE LIENHOLDER.
5602	We are sorry, but you have reached the maximum number of authorized attempts
5605	No Titles found
5608	Only one electronic certified lien holder is allowed per title
5610	Major color and minor color cannot be the same
5611	is required
5613	Invalid VIN
5615	Is Invalid
5620	You are not authorized to access this Dealer
5621	Invalid Character. Must be alphanumeric, space, or #():;?.,&*/*+.
5622	Invalid state abbreviation

Integration Services: Web Service Specifications

Code	Description of Error
5623	Invalid country abbreviation
5624	Maximum 9 characters
5625	Maximum 19 characters
5626	Maximum 30 characters
5627	Maximum 32 characters
5628	Must be 17 characters
5629	Zip code format is 5 characters plus 4
5632	Your account is locked. Please contact your administrator
5633	No result(s) found
5635	Invalid Login - Check to make sure the Username and Password are current
5636	Invalid Login - Check to make sure the Username and Password are current
5646	A title for {0} was already imported
5649	The maximum sales price for a vehicle is 99,999,999.99
5652	License for GDN is expired - Contact the TxDMV to renew
5653	You must provide an email address if eReminder is selected
5654	A title for {0} has been approved
5655	The amount must be less than \$100,000
5656	The amount must be greater than \$0
5658	Incomplete address
5660	Computed gross weight(Empty weight + Carrying capacity) must be within the range \${min} and \${max}
5666	Maximum title limit for {0} county reached. No new title requests can be started
5669	A title for {0} has been previously submitted
5680	Minimum amount is \$5.00
5681	No dealer accounts found
5682	Must be numeric
5688	Invalid model year returned. Accepted year = {0}
5689	An application is already in progress for {0}
5690	A title for {0} has been returned

Integration Services: Web Service Specifications

Code	Description of Error
5691	Trade-In Year Model Invalid
5697	Value cannot exceed 9,999,999.99
5698	Deal Number, VIN, or Title Id must be provided
5699	A Title already exists for this VIN
5700	Inches entry is invalid. The number must be between 1 and 11
5701	Carrying capacity for Trailers must be at least 1/3 of the Empty Weight
5705	No further processing is available
5800	Odometer brand must be A, N, X or Blank
5801	Odometer reading must be numeric or 'EXEMPT'
5802	Invalid ID Type. ID Type must be a number 1 thru 6
5803	Deal Number, VIN, or Title Id must be provided
5804	A Title already exists for this VIN
5805	Maximum 60 characters
5806	Invalid Body Style
5807	Maximum {0} characters
5808	Update Title may only be used for a title in import status
5809	A title with this VIN exists for another Dealer
5810	Valid military types are AA, AE, and AP

Appendix A.3 Response Example: insertTitle Method

Both successful and unsuccessful title inserts are shown below.

Appendix A.3.1 Successful title insert:

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/">
  <soapenv:Body>
    <ns:insertTitleResponse xmlns:ns="http://service.application.title.txdmv">
      <ns:return xsi:type="ax21:InsertResponse" xmlns:ax21="http://model.application.title.txdmv/xsd"
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">
        <ax21:messages xsi:nil="true"/>
        <ax21:success>true</ax21:success>
        <ax21:titleId>6196</ax21:titleId>
        <ax21:transactionDate>2014-11-24</ax21:transactionDate>
      </ns:return>
    </ns:insertTitleResponse>
  </soapenv:Body>
</soapenv:Envelope>
```
